COMP 129 PROOF OF TESTING

1. Project title

2. URLs for project (Like the github URL and any other URLs or applications used)

3. Integration Tests

   For your user stories so far, you can discuss what tests you have completed to check to make sure that the story is indeed done, and that you have some software that is quality. Please follow the Lisa Crispin's template discussed in class to document four of the stories you have tested (Pasted here...)

   Story #/Name:
   Tester's Name:

   Description of Acceptance Criteria to be followed or Acceptance Test to Perform:

   Assumptions one needs to make:

Variations	Expected Results	Comments	Done?

   Additional Notes

4. Unit Tests

   For this part, you should provide a list of the unit tests that you have developed, quickly state what it is designed to test, and provide 2 or 3 defining examples, explaining what the test is looking for and place it in this document. (These should not be all of the tests that you have, but you should have many many examples of testing and how it is being done in yoru project. Then zip this document **along with the code you have written for testing** that you have developed so far.
